COMP 490/L - Product Vision

Team Members: Jael, Tex, Imprezz, Lance, Ricardo

What is the product?

AUTOMATED MECHANICAL GANTRY SYSTEM- an expandable(Dependent on either screw or gear track) gantry that'll fit within allotted space of user's desired area of use. The gantry system will offer help to users lifting objects that require more than 1 person and move objects around a workspace either by automation or manual instructions.

Who is it for?

Hobbyists and small businesses/workshops that require assistance lifting heavy objects or a specialized multi-tool system.

What problem does it solve?

Moving heavy objects can be difficult or unsafe for someone working alone especially in smaller workspaces where larger industrial equipment may not be practical.

Why is it useful/different?

Gantry systems on the market still require physical effort or are limited to the usual mono-movement system. Our system would provide powered X-Y movement and a multi-purpose design. Other existing systems are either too specialized or too big for the average consumer or small workspace.

Product Vision Statement

Our product is a mechanical gantry system that helps hobbyists and small businesses safely lift and move heavy objects while allowing a flexible platform for different workspace tasks.
