Chip, STM chip, numbers make it a specific design
Control voltage
Communication
X-Motor controller over “UART” run at the same time X*3 pins
Sensors not conflicting
Usb c/b, female connect, 1 button, and integrated led, have grn but default should be fine

Devboard is the entire extension
Esp32 specifically is the chip

9V + conservative
Plug into wall we dont care

4 motors, a connection to another board. Must have power and communication between the 2 boards
